

## Tackle Lower Leg Problems With Revitive IX<sup>®</sup>

*Singapore's First Medically Registered Device*

*Proven to Reduce Swelling, Pain and Discomfort in Lower Legs*

**Singapore** – The symptoms of poor blood circulation due to age, genetics, and sedentary lifestyles can now be relieved and addressed in the comfort and convenience of your home with the award-winning **Revitive IX<sup>®</sup>**, the first medically registered device of its kind to be launched in Singapore.

Poor circulation occurs when there is an inadequate supply of blood flow to a particular area in the body. Symptoms are generally seen in the hands, legs, ankles and feet, ranging from aches, tiredness and swelling to numbness, cramps and coldness.

Developed and tested by researchers from London South Bank University and King's College London in the United Kingdom, the **Revitive IX<sup>®</sup>** uses Electrical Muscle Stimulation (EMS) and Transcutaneous Electrical Nerve Stimulation (TENS) technology to stimulate the thousands of nerve endings on the soles of the feet. Proven to increase blood circulation in the lower legs and feet<sup>1</sup>, it also features the **IsoRocker<sup>®</sup> System**, which gently and involuntarily allows a rocking motion to further enhance the circulation process as well as to improve the mobility and flexibility of the ankle joint.

Research shows that 80 per cent of Singaporeans suffer from poor venous circulation in their legs. Majority of these people are afflicted with aches, pains, cramps and swelling in their lower legs due to impaired blood returns<sup>2</sup>, according to leading Singapore Vascular Surgeon, Dr John Tan from The Vein Clinic.

<sup>1</sup> Studies by Professor Alun H Davies, Vascular Surgeon, Imperial College London, the United Kingdom (2013) and Dr Katya Mileva, Human Performance Centre, London South Bank University, the United Kingdom, December 2011.

<sup>2</sup> *Int Angiol.* 2012 Apr;31(2):105-15. Epidemiology of chronic venous disorders in geographically diverse populations: results from the Vein Consult Program

He said, “Many people are just not aware of the factors causing their conditions, which can severely hamper their quality of life as they are unable to work, stay active or lead their desired lifestyles. We are designed to be active but modern living has made us more sedentary plus with age, lifestyles or genetics, many people suffer from failure of the valves in the leg veins. These factors can restrict the normal blood flow in the lower legs regardless of how much exercise the individual does causing pains, aches and swelling in the lower extremities. By treating the condition early, we can significantly boost their general well being and may help prevent more severe leg problems in the long run.”

Convenient and easy to operate, users require only 20 - 30 minutes a day with **Revitive IX**<sup>®</sup> for best results. The device has 99 intensity levels to suit individual requirements and varying wavelengths to provide longer contractions, therefore improving the venous circulation flow. It also comes with an easy-to-use remote control, four TENS body pads to target specific areas on the legs and body parts and a detailed user manual.

Josh Penny, Global CEO, Actegy Ltd said, “Everyone deserves good health in life and this is why we are pleased to launch one of our most successful products in Singapore. **Revitive IX**<sup>®</sup> has provided relief to many people around the world whose daily lives were once hindered by the symptoms of poor blood circulation. We are delighted to be able to give Singaporeans the same opportunity.”

In 2012, **Revitive IX**<sup>®</sup> won international recognition as a Recipient of the Red Dot Design Award for its design.

Retailing at S\$499, **Revitive IX**<sup>®</sup> will be available at leading pharmacies like Guardian, Watsons and Unity, and stores such as Courts, Best Denki, Harvey Norman and OG.
